

1. Membuat teh manis

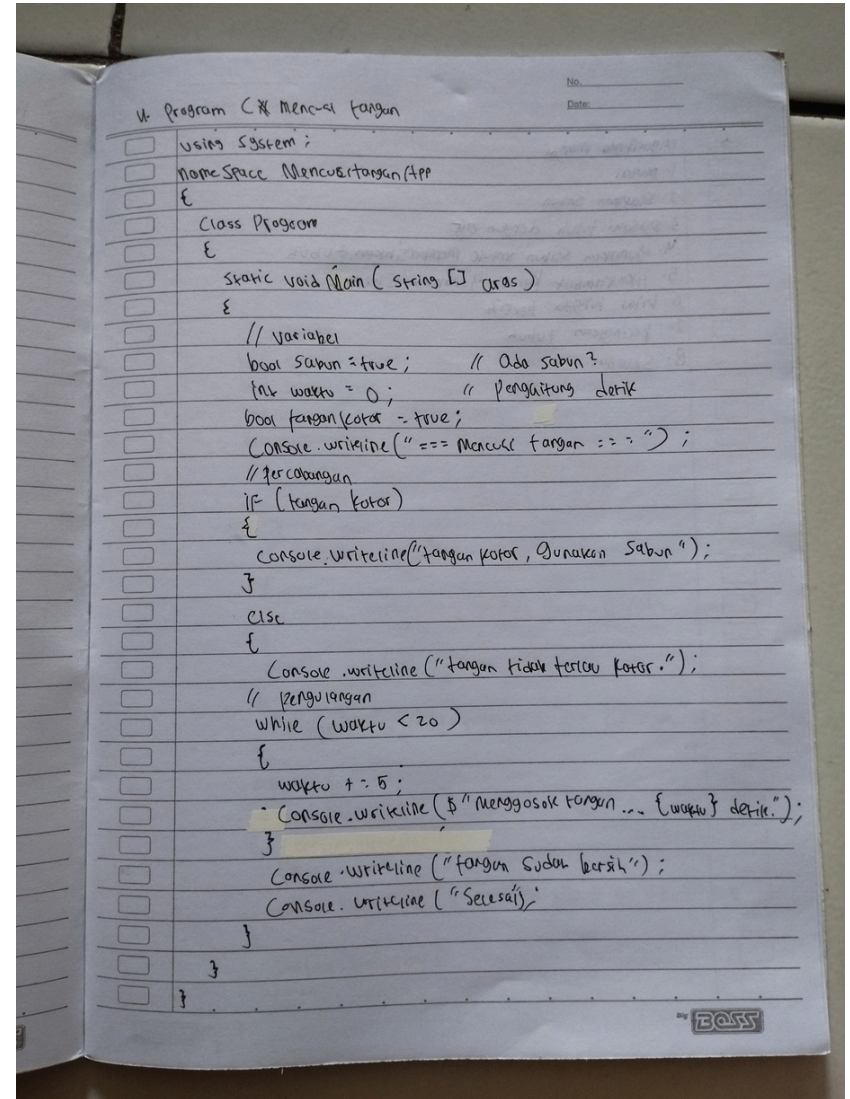

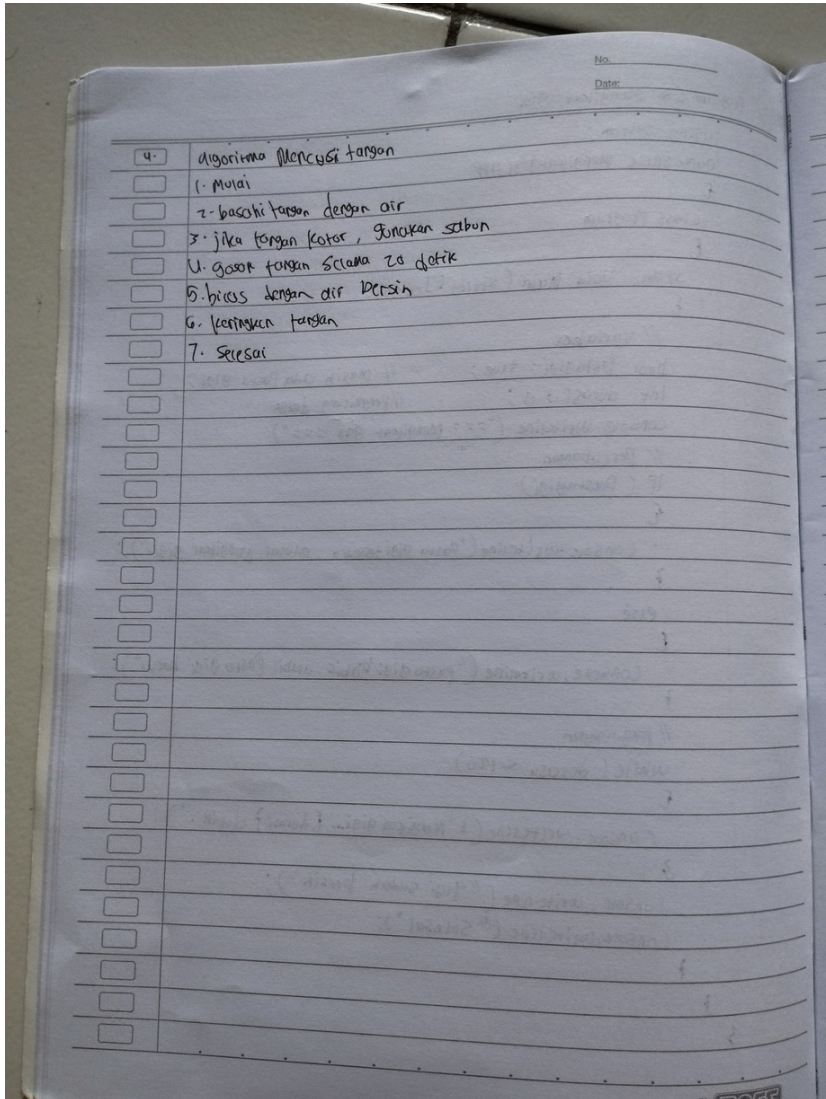

2. Membuat kopi

3. Menyikat gigi

4. Mencuci tangan

5. Mandi

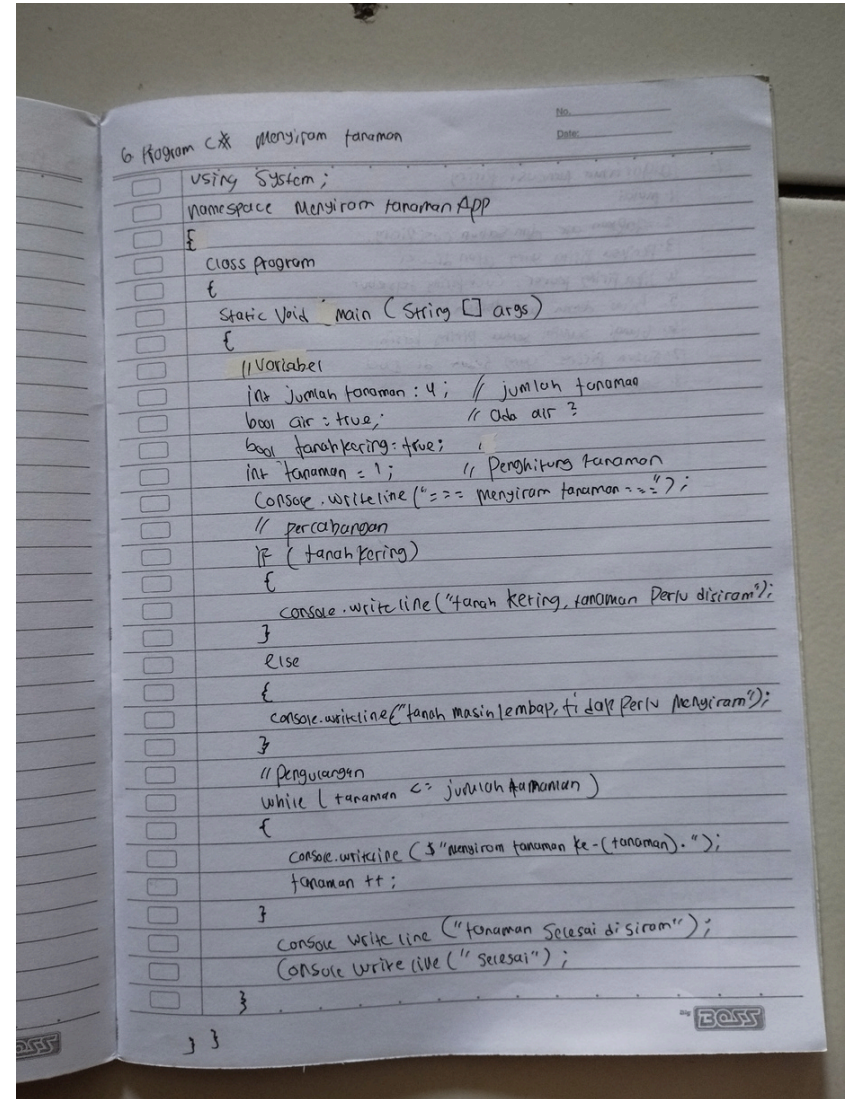

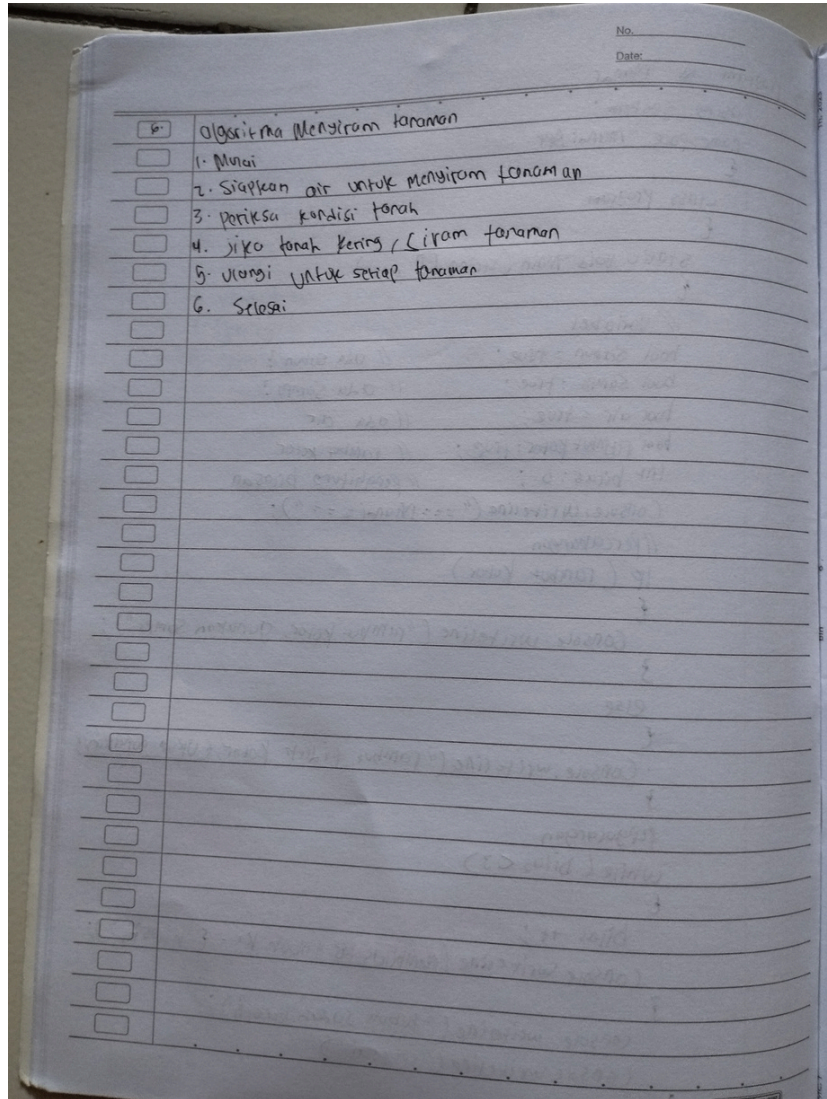

5. algoritma Mandi

1. Mulai
2. Siapkan Sabun
3. Basahi tubuh dengan air
4. Gunakan Sabun untuk membersihkan tubuh
5. jika rambut kotor, gunakan Shampo
6. bilas hingga bersih
7. keringkan tubuh
8. Selesai

5. Program C# Mandi

```
using System;
namespace MandiApp
{
    class Program
    {
        static void Main (string [] args)
        {
            // Variabel
            bool Sabun = true;           // ada sabun ?
            bool Sampo = true;           // ada Sampo ?
            bool air = true;              // ada air
            bool rambut kotor = true;     // rambut kotor
            int bilas = 0;                 // penghitung bilasan
            Console.WriteLine ("== Mandi ==");
            // Percabangan
            if (rambut kotor)
            {
                Console.WriteLine ("rambut kotor, gunakan Sampo.");
            }
            else
            {
                Console.WriteLine ("rambut tidak kotor, gunakan Sabun.");
            }
            // Pengulangan
            while (bilas < 3)
            {
                bilas ++;
                Console.WriteLine ("Membilas tubuh ke - { bilas }.");
            }
            Console.WriteLine ("tubuh sudah bersih");
            Console.WriteLine ("selesai");
        }
    }
}
```

6. Menyiram tanaman

7. Mencuci piring
